

EFFICIENCY NOW. FLEXIBILITY FOR THE FUTURE.

Light Commercial
Building Solution

Maximize Savings And Peace Of Mind With The Affordable LCBS Platform.

On average, HVAC operation accounts for nearly half of a commercial building's energy consumption. Honeywell's LCBS platform can deliver significant energy and cost savings while keeping your building's occupants comfortable and happy. This solution is built on the LCBS T commercial economizing thermostat, which increases efficiency through precise temperature control and fresh air circulation. It's a scalable, cost-effective way to ensure occupant comfort and energy savings now and in the future.

✓ Reliable Control

The LCBS T package provides reliable temperature and humidity control, with 7-day and holiday scheduling. The intuitive, 4.3-inch full-color display helps you set initial temperature and humidity levels, adjust settings and create customized views. It's easy to create a program that will keep your building comfortable when it's occupied and save energy when it's not. In addition, the built-in economizer gives you the option to bring in outdoor air to naturally lower the building's interior temperature. This "free cooling" helps keep the building comfortable and energy efficient, without the added cost of mechanical equipment operation — ultimately helping to extend the life of your equipment.

✓ Customization Made Easy

Beyond energy efficiency, LCBS T has an advantage most commercial thermostats don't offer. It's a scalable platform that can be customized with the features that best fit your building comfort needs. For example, you can easily add CO₂ sensors, extra temperature sensors and/or VFDs to create the exact solution you want while also increasing energy savings. You can even add connectivity for 24/7 remote control and diagnostic alerts that let you address issues quickly — often before occupants are even aware of a problem.

No matter how you personalize it, LCBS T is a reliable, cost-effective way to ensure your building is comfortable and efficient, while also paving the way for easy upgrades in the future.

FEATURES & BENEFITS

Simplicity. Program temperature and humidity settings on the sleek, full-color touchscreen wall interface. You can also create customized views and control who can access the interface with the keypad lockout feature.

Cost Savings. Scheduling, protected set points and a built-in economizer help reduce energy usage. The flexible system can also be configured to fit your needs with CO₂ sensors or a VFD.

Occupant Comfort. Precise controls maintain ideal comfort conditions for your occupants.

System Reliability. Honeywell represents a century of HVAC experience. Trusted, tested products mean system longevity and peace of mind for you.
